

Mechanics of sticky events

Håkan Johansson,
Chalmers, Göteborg

Lichtenberghaus,
Darmstadt, April, 2017

Introduction

- Store slow-control information (HV settings, magnet currents...) in the data stream
 - Integrate with a distributed DAQ (NuSTAR).
 - Follow the DAQ topology.
- 'Normal' events not suitable:
 - Just flow through the DAQ / analysis.
 - Late connected clients / files would not get earlier set values.
- New concept: sticky events.
 - Delivered however late the connection is.

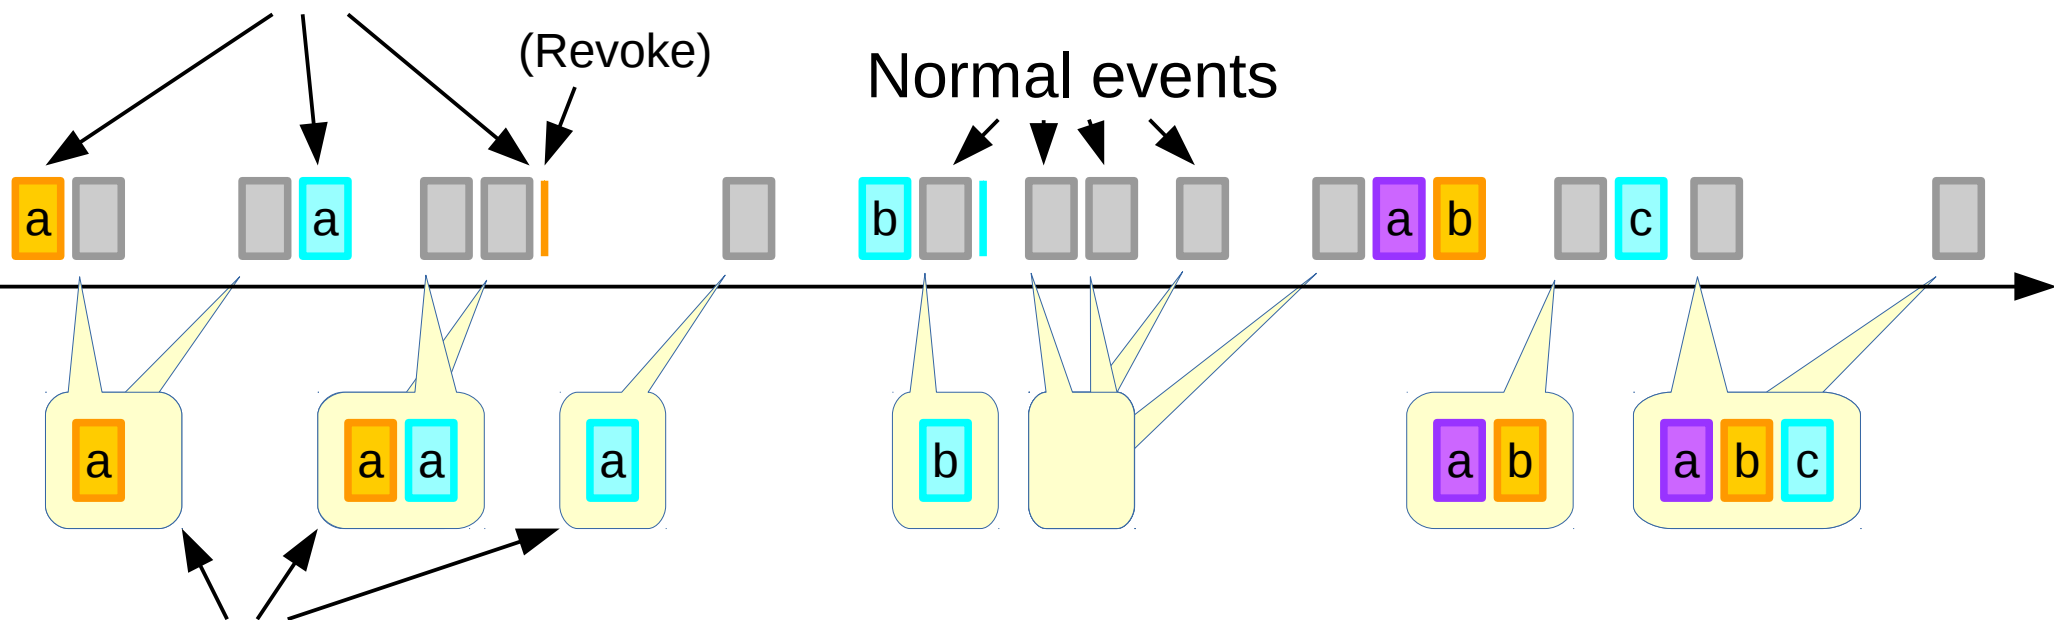

Sticky subevents

- Packaged in sticky events.
- The sticky thing is the subevents.
 - Sticky = held active until replaced.
- Sticky subevents identified (as usual) by
 - `type/subtype/ctrl/crate/procid`
- Removed as active with `length = -1`.

Sticky events: simple semantics

- Sticky subevents are valid until replaced
- ... or revoked (replace by nothing)

Sticky (sub)events (same colour = same id, letter is 'content')

Sticky state

(is logically defined before each normal event)

Guaranteed delivery

- An receiver (either file or network client) will **before** each normal event have received *exactly* the (at that point) active set of sticky subevents.

Sticky subevents may be delivered:

- Multiple times.
- In any order.

DAQ / proxy servers

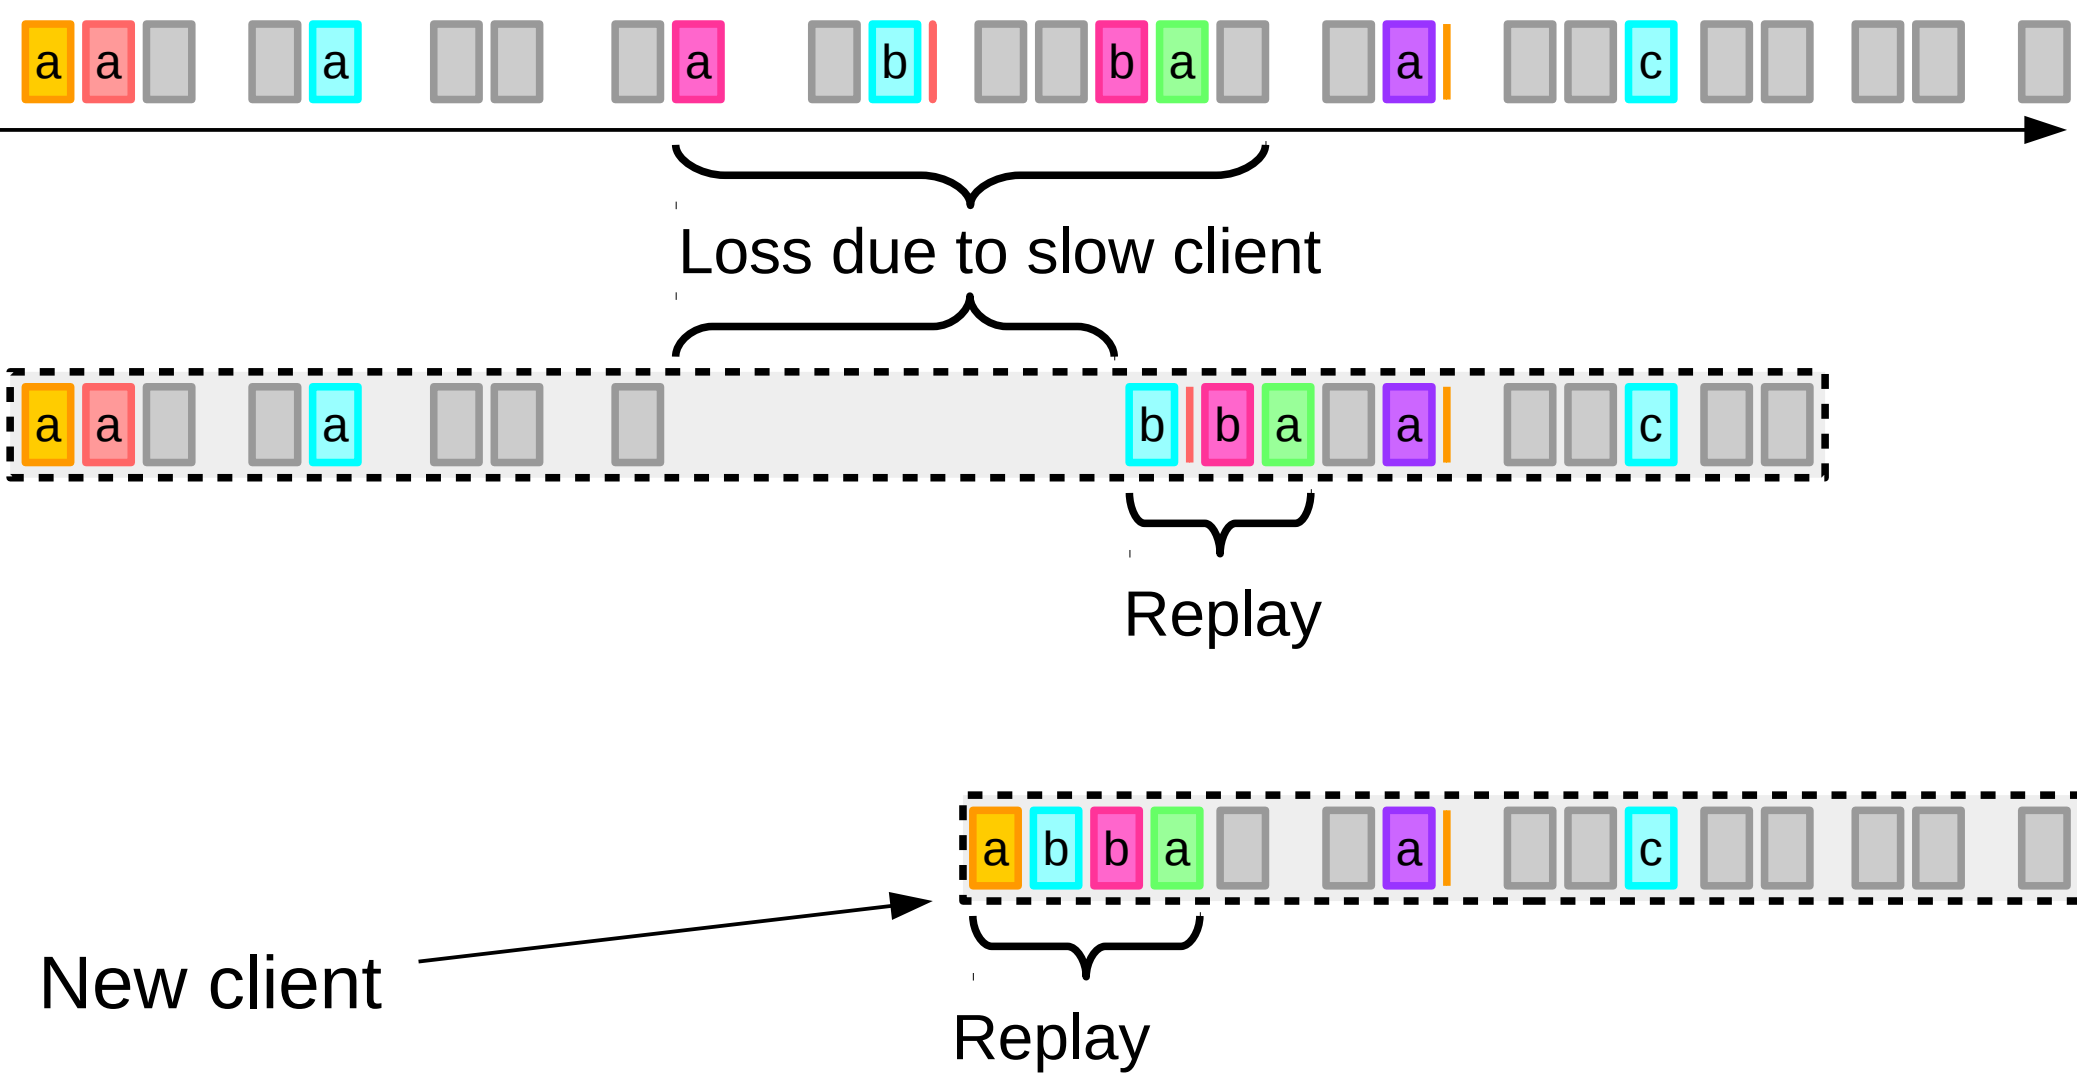

- Absorb the complications in standard programs.
- Keeps analysis clients simple.

Not so much a design choice,
rather a lucky side-effect.

Output stages keep track

Output stages keep track (network)

Merging / time sorting

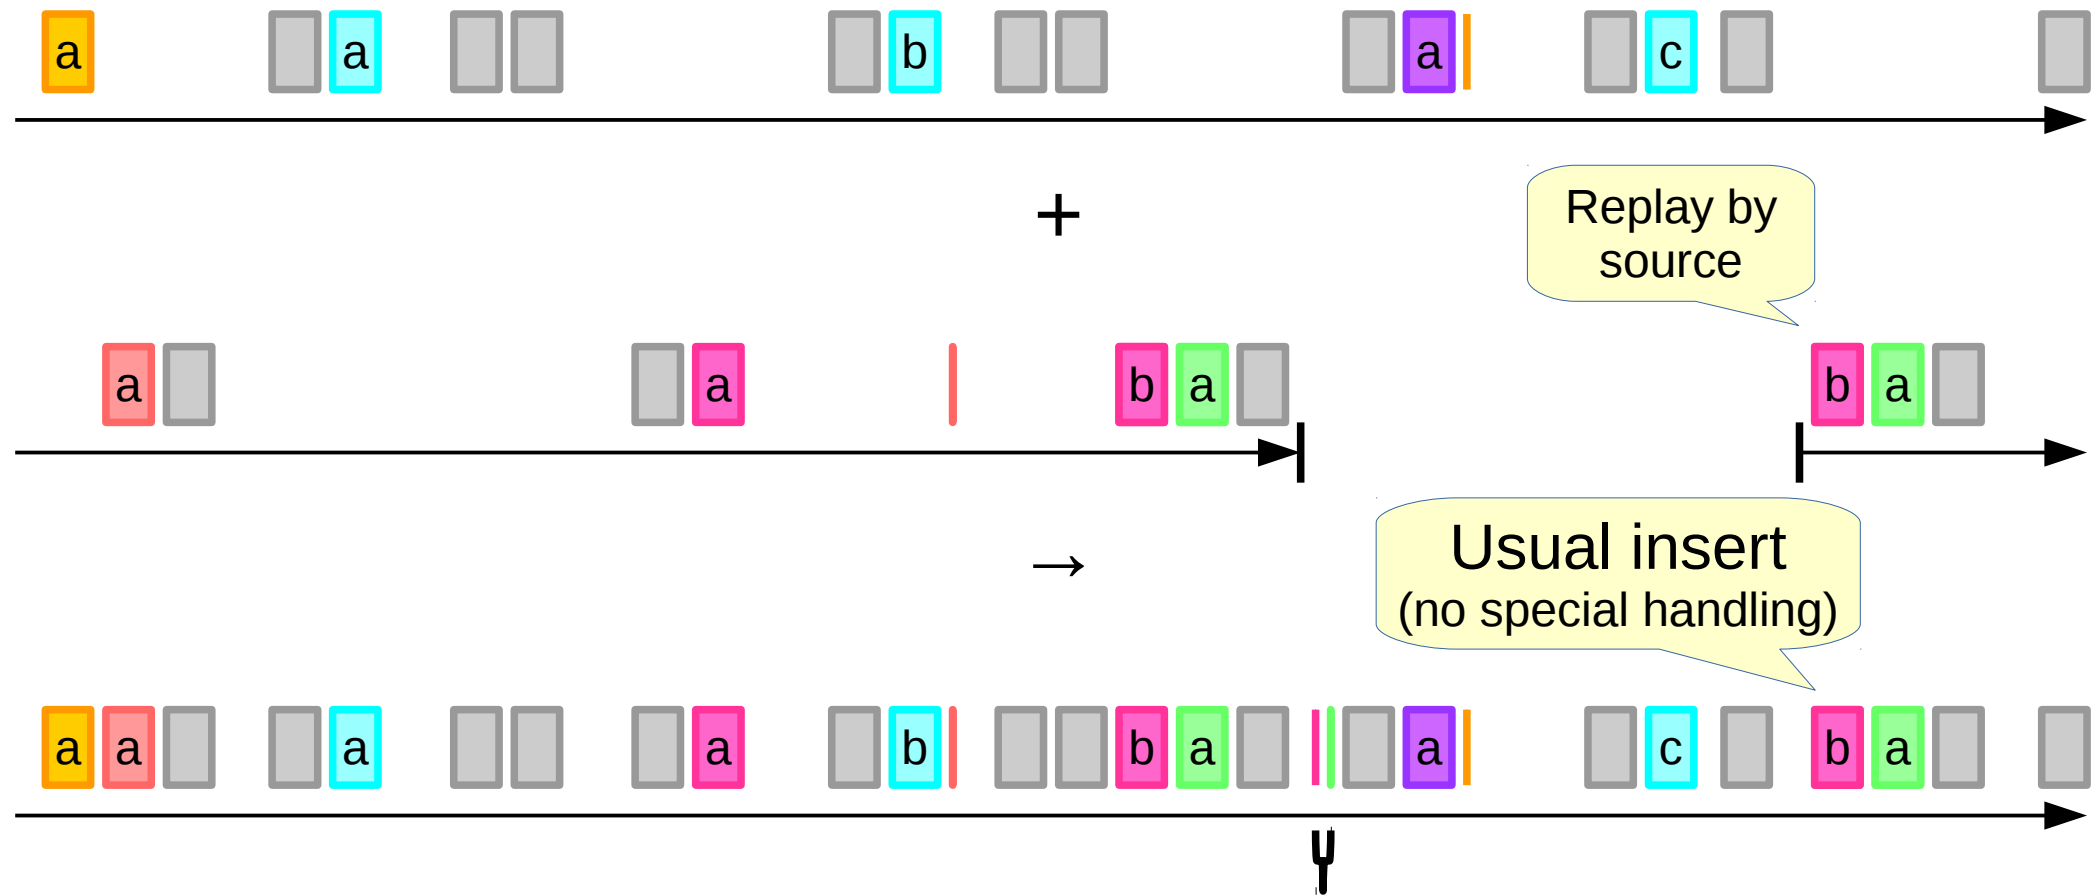

+

→

Merging – loss of source

Revoke active sticky subevents that lost their source

Complicated?

Complicated? (comparing compressed)

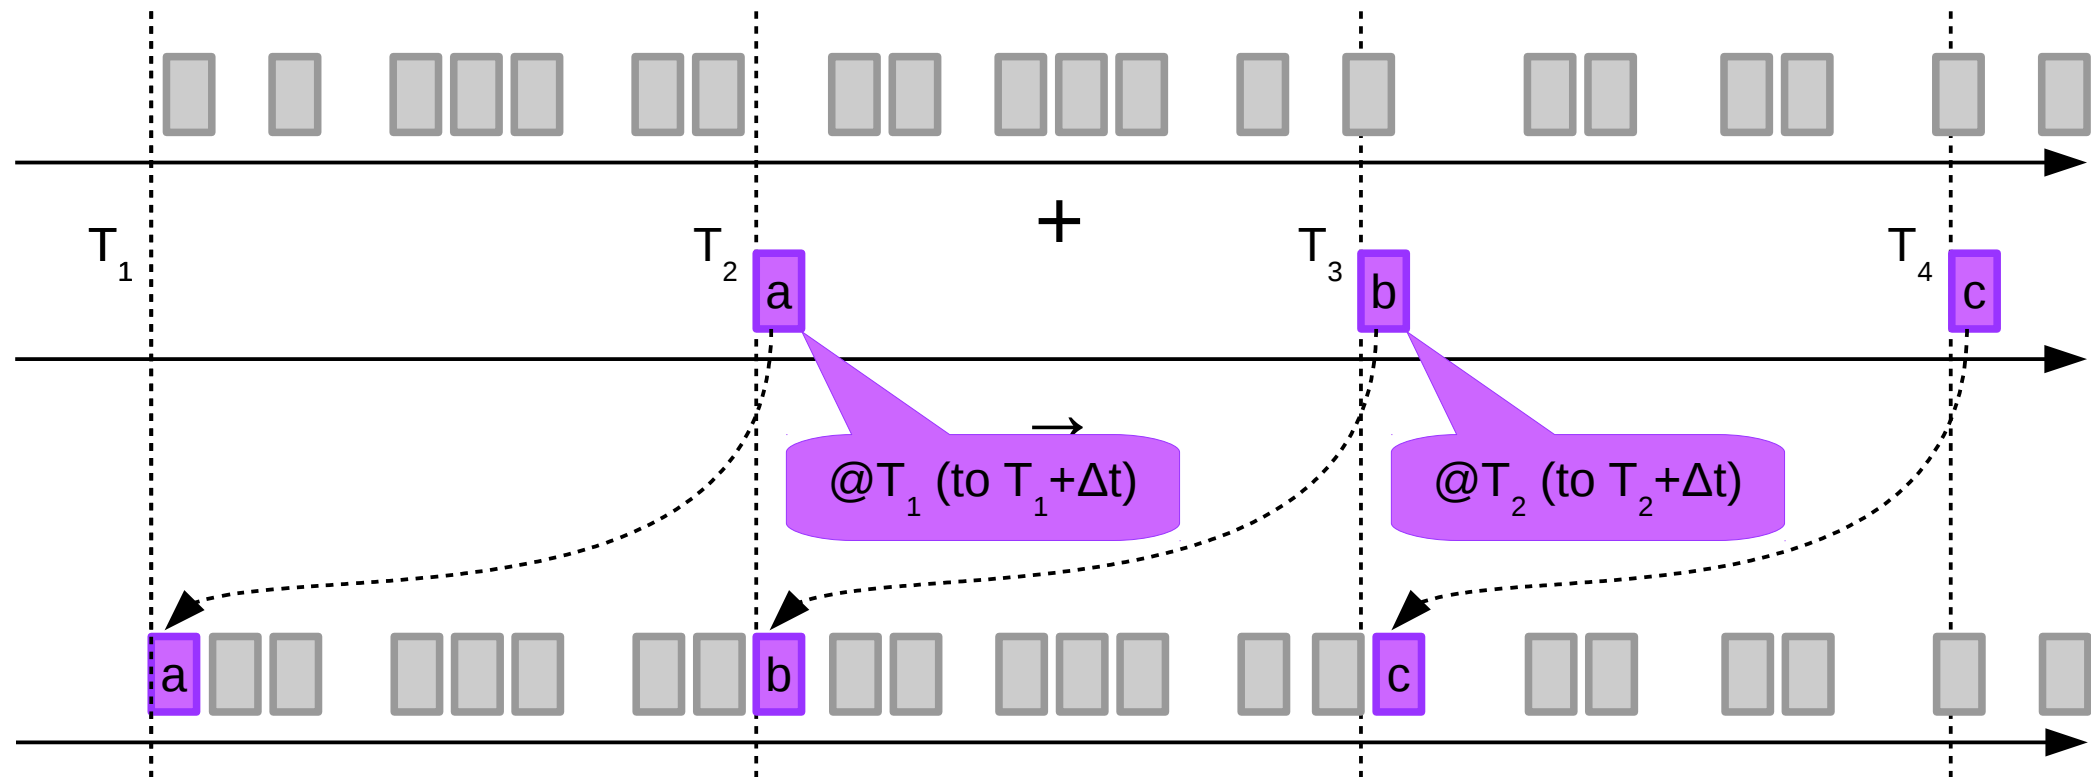

Short-range "time-machine"

- Set-values are stored with change timestamp
- Measured values are only known good after each measurement period, but needed by analysis before the period.
 - Use time sorter!
 - Measure during interval $[T, T+\Delta t]$
 - Record at time $T+\Delta t$
 - Time-stamp as time T

Short-range "time-machine" II

→ Use time sorter!

- Measure during interval $[T, T+\Delta t]$
- Record at time $T+\Delta t$
- Time-stamp as time T

Finale!

Thank you!

Lots of **FUN**
