# Readout style Taxonomy

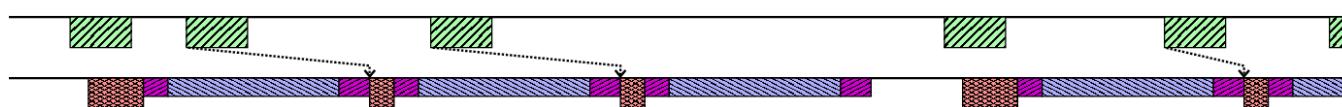

Trigger requests

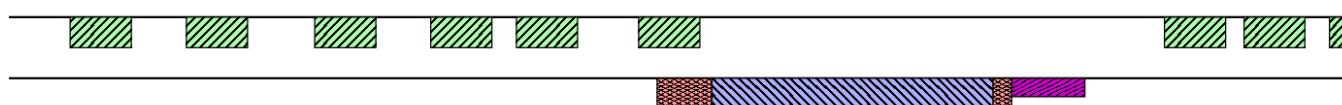

Single-event read-out

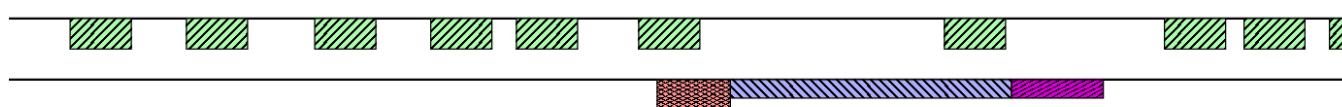

Single-event read-out, early DT-releasee

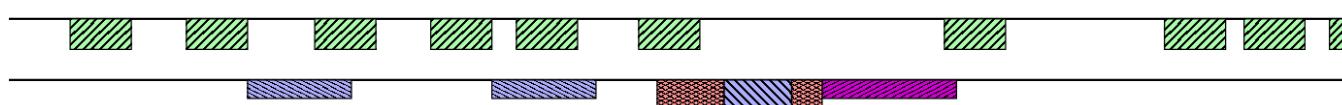

Multi-event read-out

Multi-event read-out, early DT-release

Shadowed multi-event read-out

DAM conversion / busy

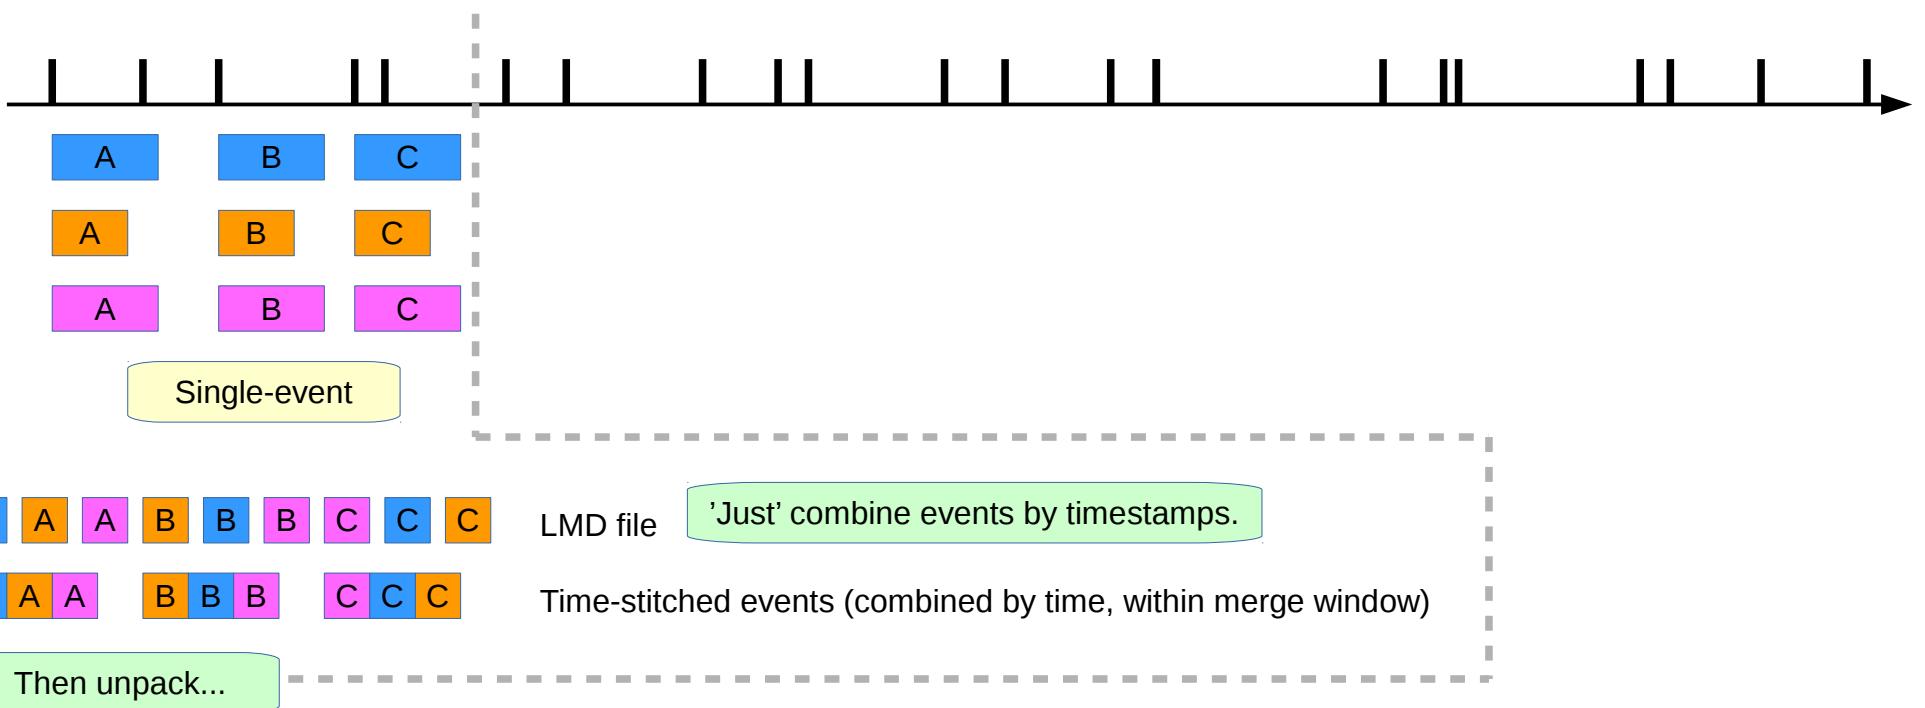

DAQ overhead

DAQ read-out

(after dead-time release)

(shadowed, background, non-DT)

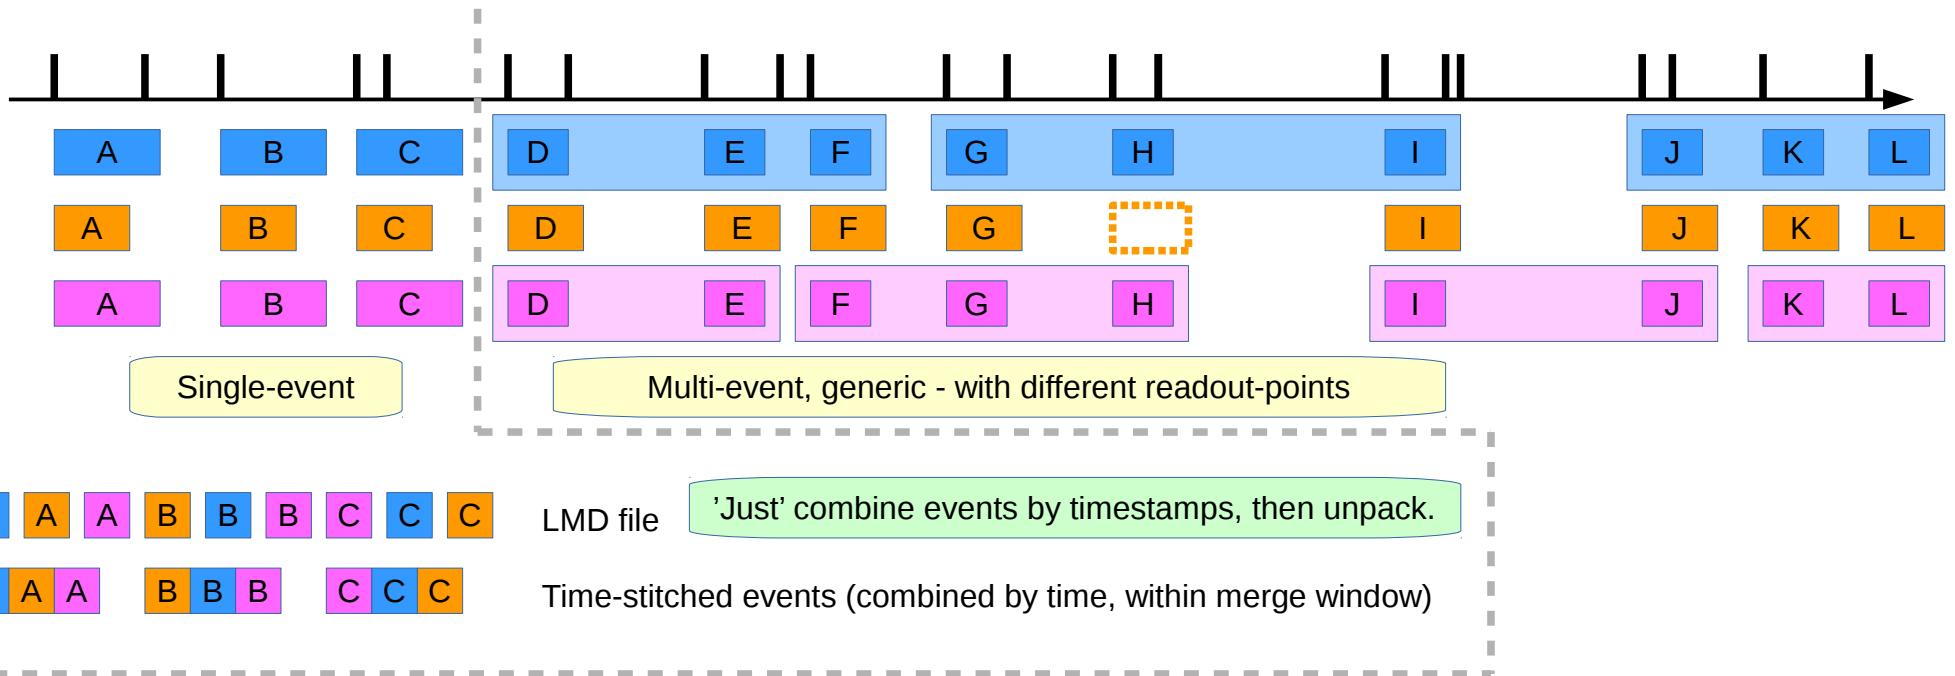

# Single-event, time-sorted

This is how we have made time-sorted data  
look (to unpack & analysis) like  
it comes from just one dead-time domain

—  
one LMD event per physical event.

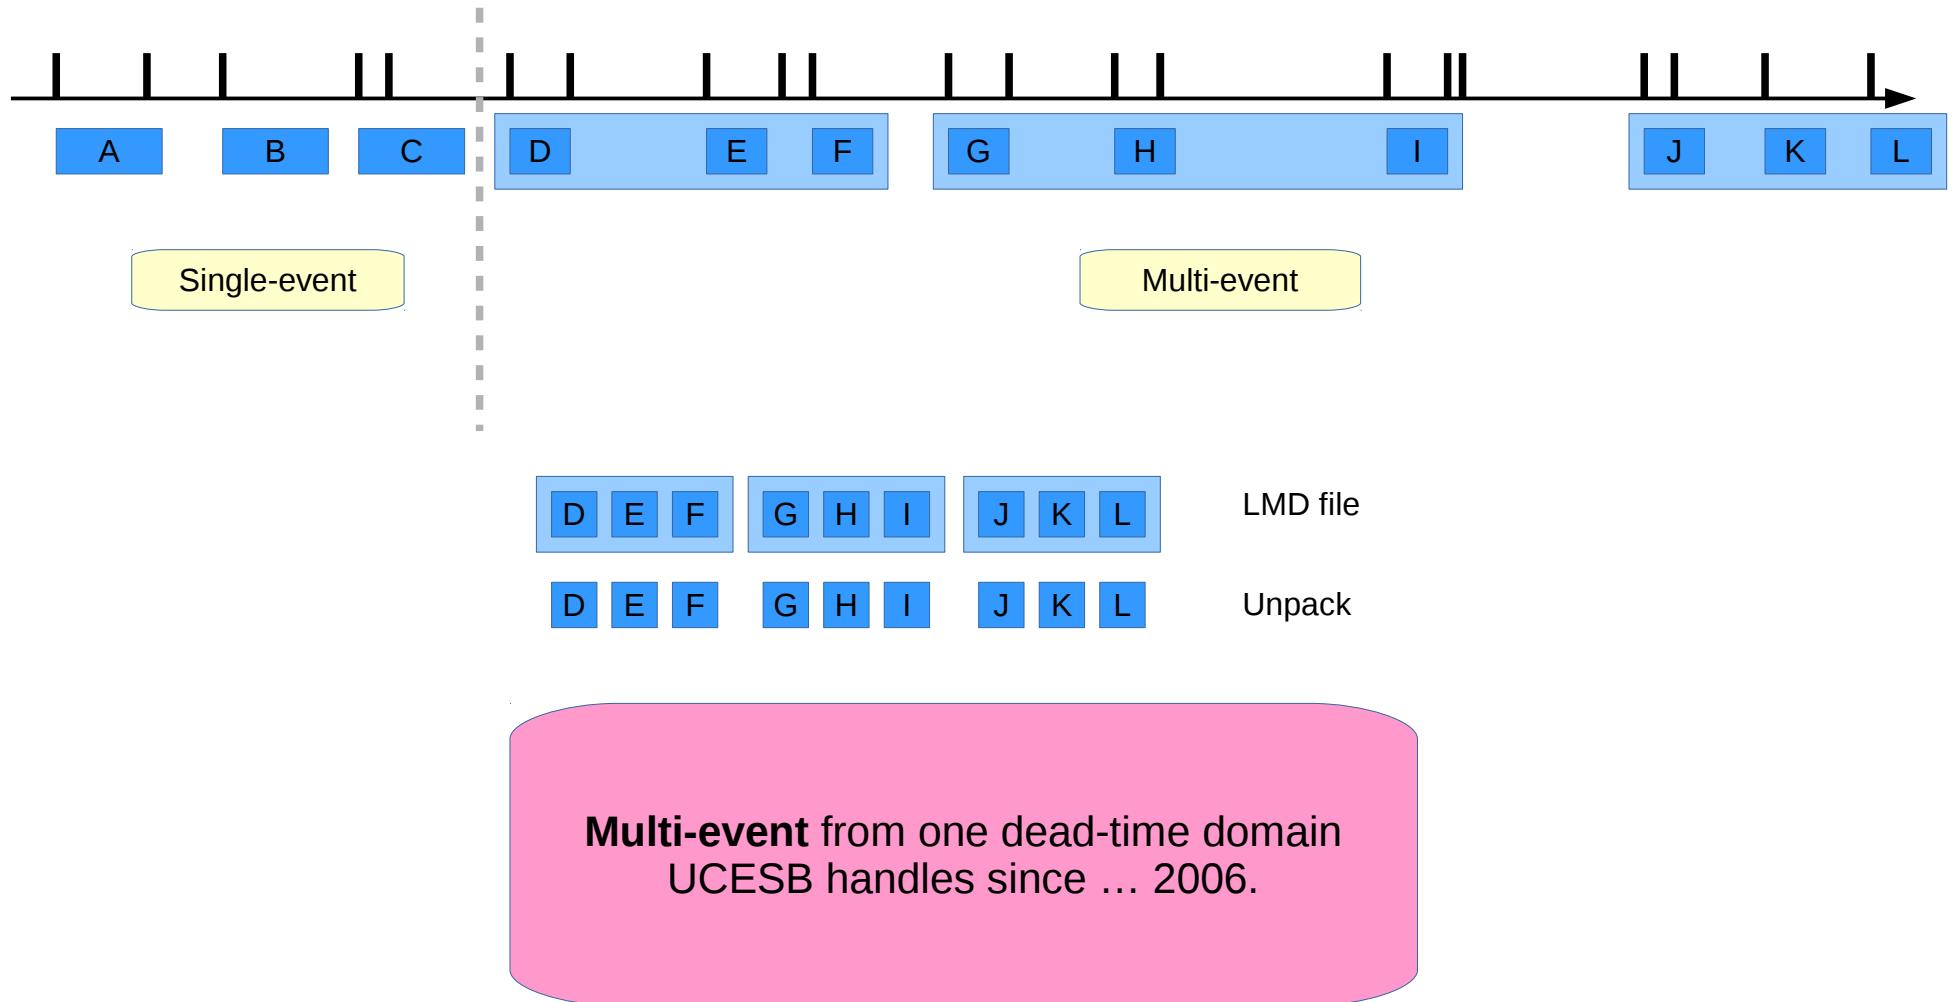

# Multi-event, time-sorted

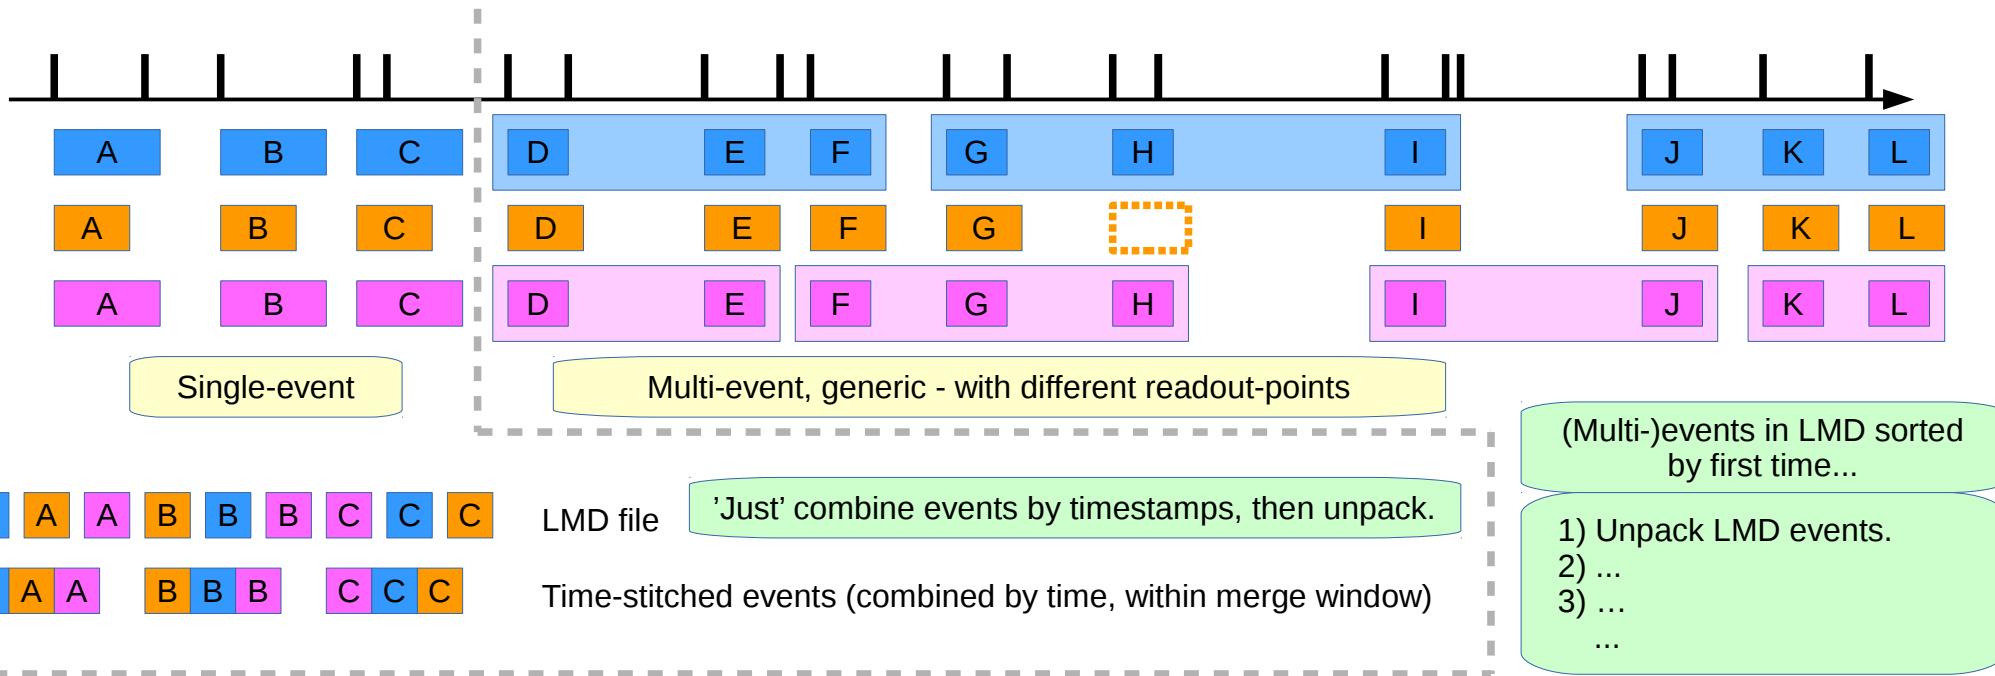

This is how we have made time-sorted data  
look (to unpack & analysis) like  
it comes from just one dead-time domain  
—  
one LMD event per physical event.

Now we want **multi-event time-sorted** data  
look (to analysis) like  
it comes from just one dead-time domain  
—  
one **event** per physical event.

# Multi-event...

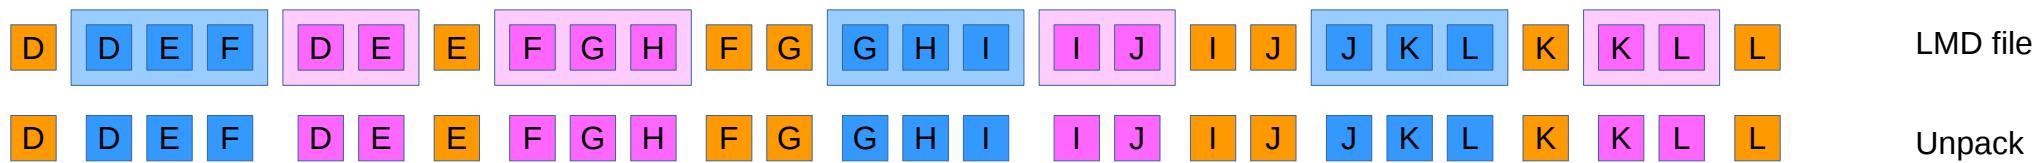

# Multi-event, time-sorted

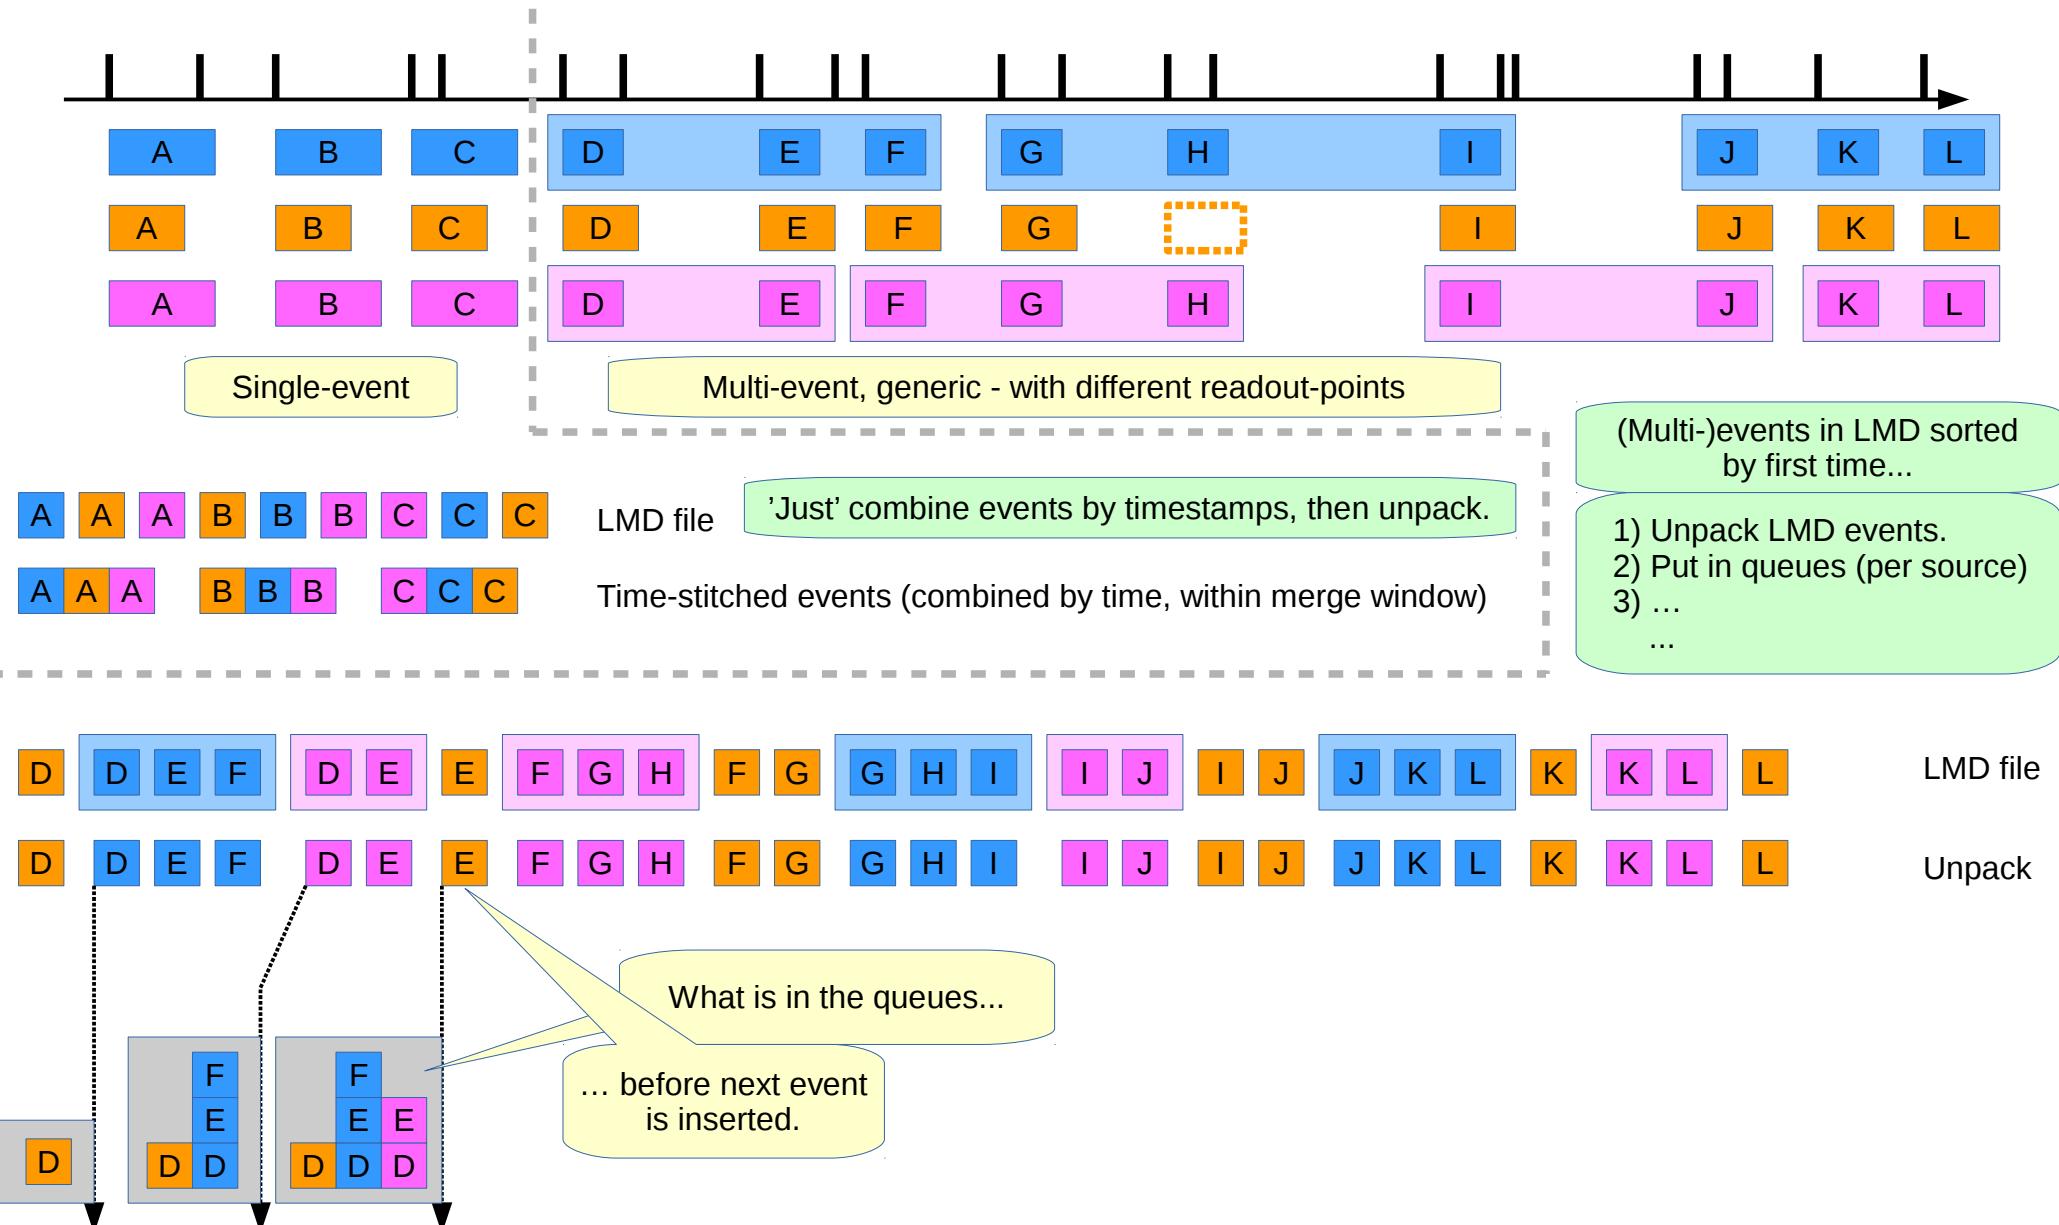

This is how we have made time-sorted data  
*look* (to unpack & analysis) *like*  
it comes from just one dead-time domain  
—  
one LMD event per physical event.

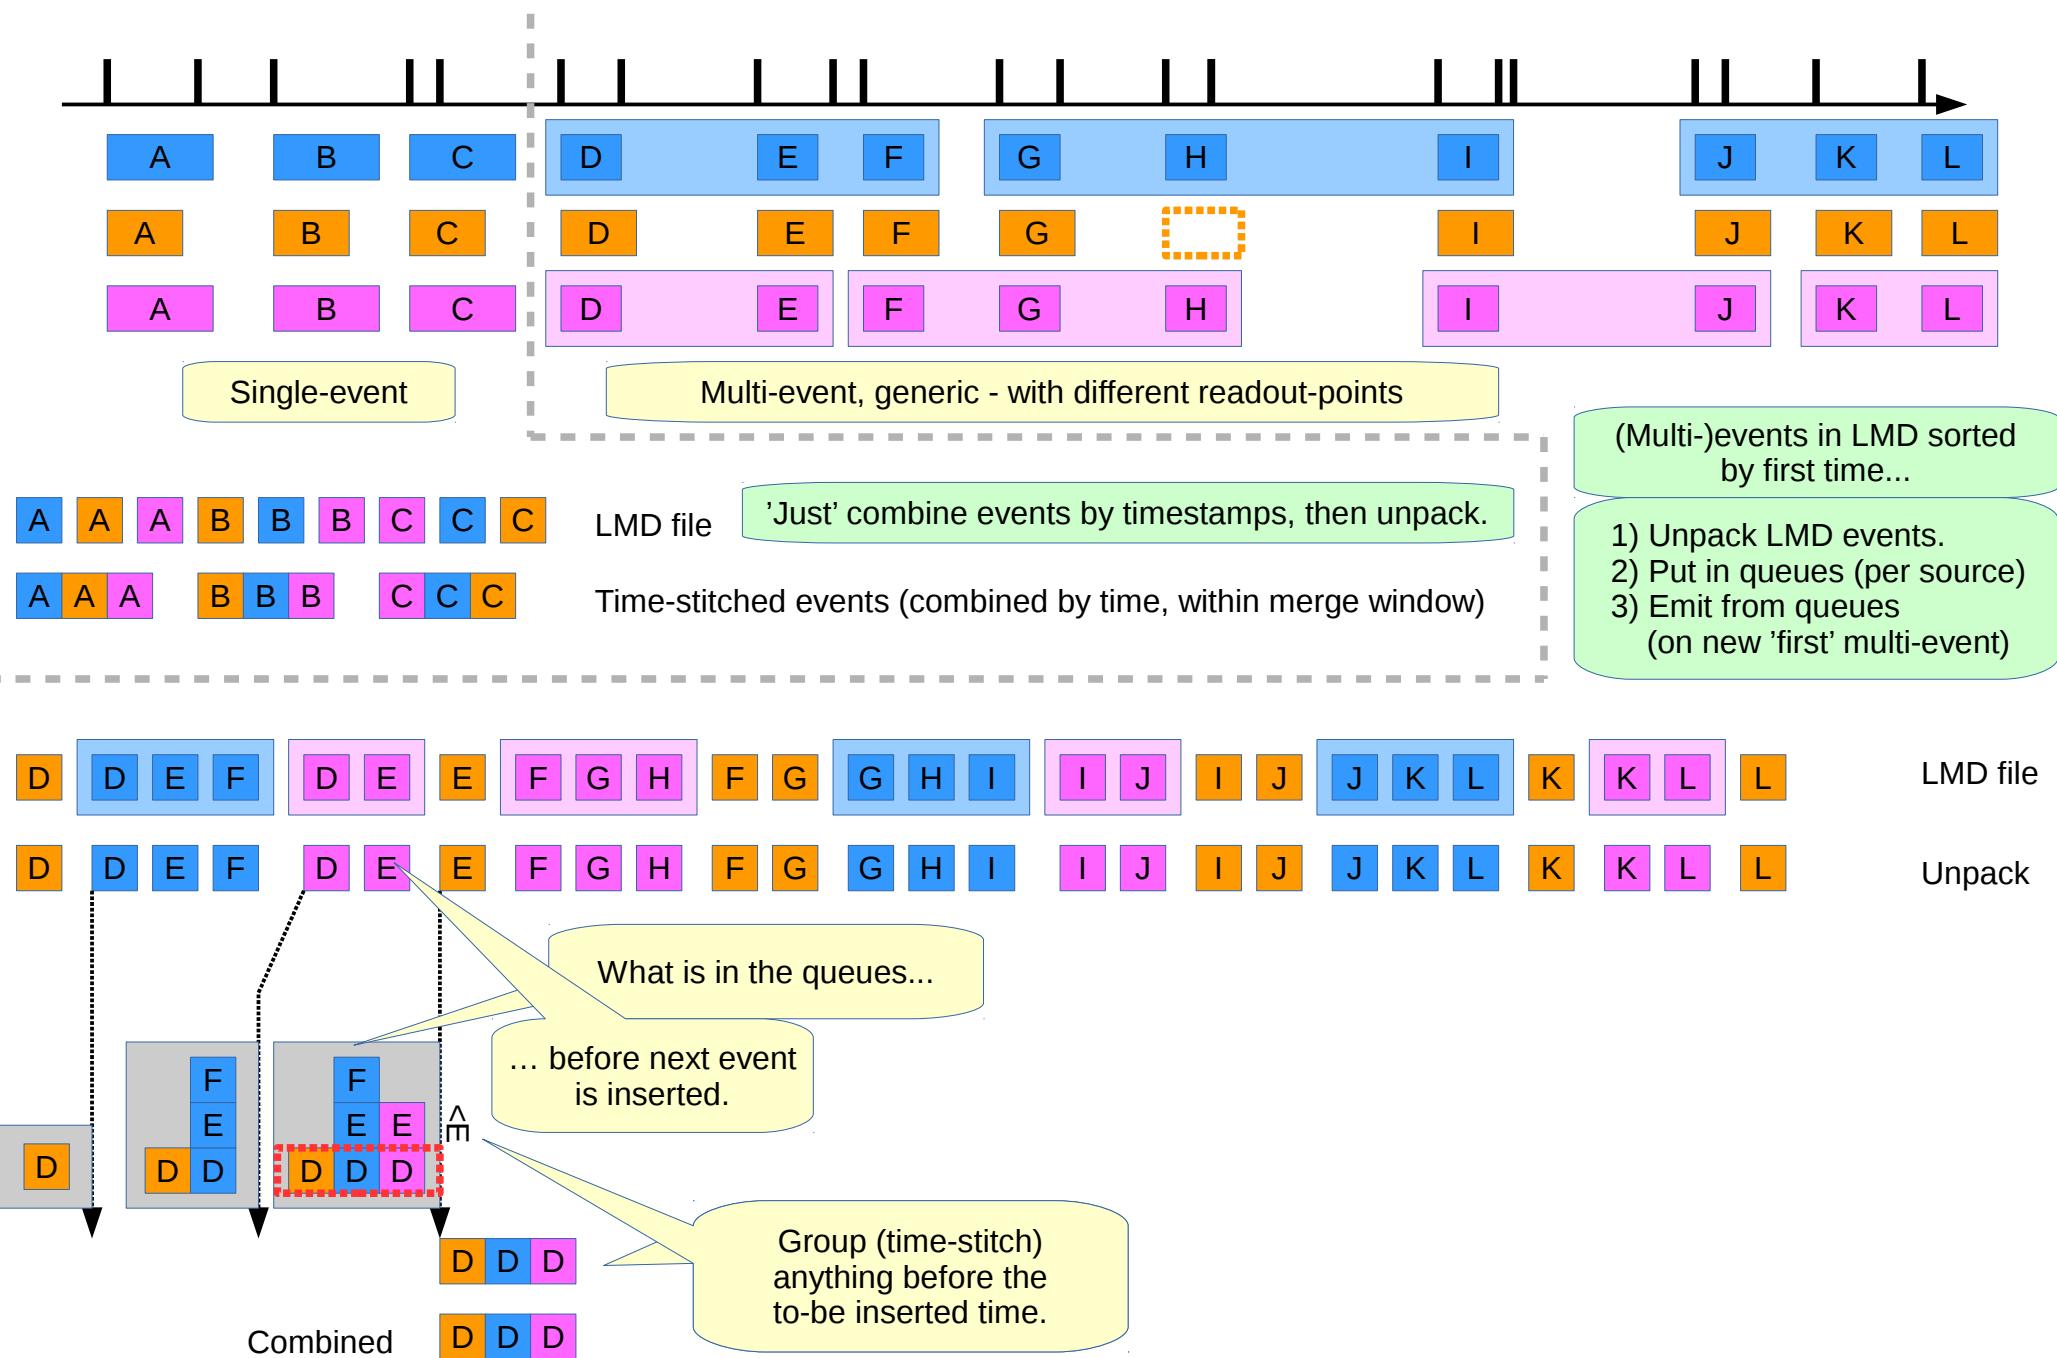

Now we want **multi-event time-sorted** data  
*look* (to analysis) *like*  
it comes from just one dead-time domain  
—  
one **event** per physical event.

- Single-event
- Single-event, early DT-release
- Multi-event (e.DT-rel,shadow)

Free-running

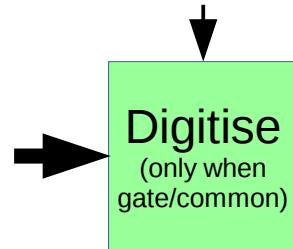

Readout strategy:

- Free-running  
(pick ROI by CPU if wanted)

# Data flow / Buffer topology

Gate / common (start)

Triggered ("classic")

Examples:

Most CAMAC

SIDEREM

CAEN V7x5<sub>(ADC,TDC,QDC)</sub>

MADC32

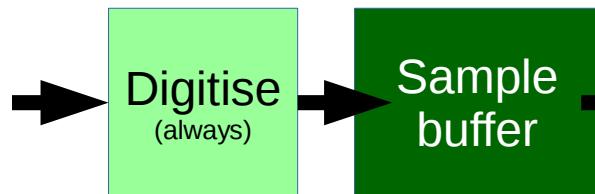

Examples:

Behaves like it is 1

AMS

Triggered, free-running front-end

Gate / common (start)

Pick  
(region-of-interest)

VFTX

FEBEX

TAMEX

KILOM/cTDC

MDPP16

MTDC32

SOFIA TOF

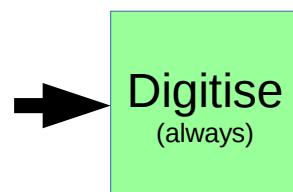

PSPs

{ NeuLAND,  
TOF Fibers }

MUSICs

firmware

Free-running
