

Do you really need help for such questions?

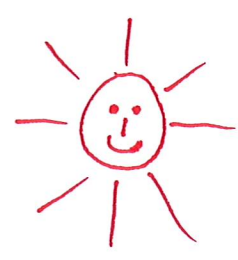

OK, but just for a few of them!

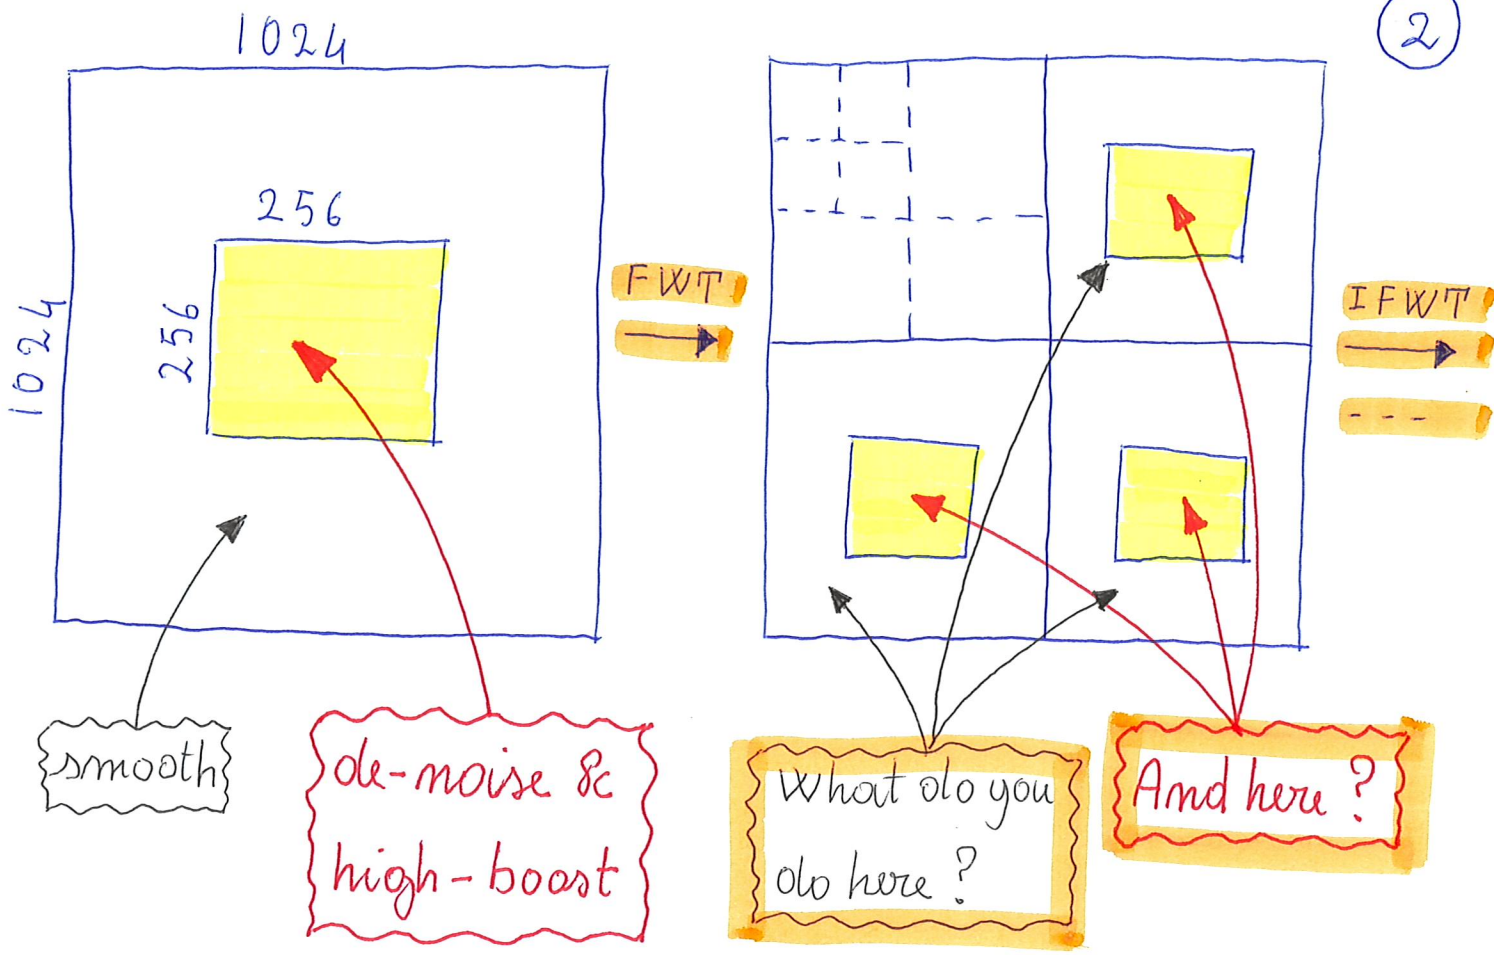

• 2(a) →

Methods 1 & 2:

Why use traditional methods of high-boosting, smoothing and noise reduction if you can do all that **MUCH BETTER** using wavelets ???

Here is the basic idea !!!

Method 3:

Why not simply lighten the block and/or darken the rest of the image??

So simple, so good !! ☺

Of course, you can use other methods. But be careful not to overwork what you have already done using wavelets !!!

--- Or maybe Shannon was a visionary scientist able to predict the future ??

Yes, quantum computing !!
